

Pharmacy Staff Dashboard

The Pharmacy Staff Dashboard is designed for pharmacists and pharmacy assistants who handle daily medicine dispensing, billing, and patient support activities.

It focuses on making prescription processing fast, accurate, and easy to manage.

1. Dashboard Overview

This is the main home screen for pharmacy staff.

Features

- Displays pending prescriptions waiting for dispensing
- Shows medicines that still need billing or verification
- Daily task summary for staff workload tracking
- Quick shortcuts for billing and dispensing actions

Purpose

Helps staff quickly understand daily pharmacy activities and pending work.

2. Prescription Processing

This module manages the medicine dispensing workflow.

Features

- Search patient prescriptions
- Verify doctor-prescribed medicines
- Dispense medicines to patients
- Mark prescriptions as:
 - Fully Dispensed
 - Partially Dispensed
- Print medicine labels

Purpose

Ensures correct medicines are given to the patient with proper tracking.

Developer Notes

- Prescription status should update in real-time
 - Barcode support can improve dispensing accuracy
 - Label printing integration required
-

3. Medicine Billing

Handles pharmacy payment and invoice generation.

Features

- Create pharmacy bills
- Apply discounts
- Support insurance billing
- Print receipts and invoices

Purpose

Simplifies payment collection and billing operations.

Developer Notes

- Should integrate with hospital billing system
 - GST/tax calculation support may be required
 - Auto-fetch medicines from prescription
-

4. Inventory Access

Allows staff to check medicine stock availability.

Features

- Search medicines by:
 - Name
 - Batch Number
 - Barcode
- View available stock quantity

Purpose

Helps staff quickly identify available medicines before dispensing.

Developer Notes

- Real-time stock updates required
 - Fast search functionality important
 - Barcode scanner integration recommended
-

5. Return & Exchange

Handles returned or replaced medicines.

Features

- Process medicine returns
- Replace damaged medicines
- Automatically update stock

Purpose

Maintains accurate inventory and return records.

Developer Notes

- Return approval workflow may be needed
 - Track return reason and batch number
-

6. Patient Assistance

Supports communication between pharmacy staff and patients.

Features

- Provide dosage instructions
- Explain medicine usage
- Send refill reminders

Purpose

Improves patient safety and medicine adherence.

Developer Notes

- SMS/notification integration can be added
 - Multi-language instruction support useful
-

7. Daily Operations

Used for shift-based pharmacy management.

Features

- Shift handover notes
- Daily sales entry
- Cash collection tracking

Purpose

Ensures smooth staff coordination and financial tracking.

Developer Notes

- Shift logs should be timestamped
 - Cash summary reports can be generated
-

8. Alerts & Notifications

Provides important operational warnings.

Features

- Out-of-stock alerts
- Prescription clarification requests
- Expiry warnings during dispensing

Purpose

Prevents dispensing errors and stock issues.

Developer Notes

- Alerts should appear in real-time
- Priority-based notification system recommended
